                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       requests: clonerequest@sanger.ac.uk
On Aug 31, 2001 this sequence version replaced gi:14161146.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (22-AUG-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                          A novel DNA segment (AAT34162) has an isolated sequence region defined as the Fas gene promoter region. This includes a number is also included. The DNA segment was isolated from a human peptide corresponding to nt 23-346. It can be combined with the gene is under the transcription factor binding sites. A coding sequence for placental DNA library using a 32P-labeled segment of human Fas contact the gene is under the transcription factor binding sites. The promoter region can be transcription factor binding sites. The promoter region can be used a means of treating Fas mediated apoptosis disorders such as malionancies and antoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             827 gagtgtgtgcacaaggctggcacgcccagggtcttcctcatggcactaacagtctactga 886

                                                                                                                                                                                                                                                             Olek A,
                          The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular acute myeloid including eye diseases, atterioscierosis, anaemia, cancer, acute myeloid including eyeneration, arterioscierosis, anaemia, neurofibromatosis, macular degeneration, arterioscierosis, anaemia, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                       Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal

AAAC97991 to AAC98763 encode the human colon cancer associated proteins, AAAC97991 to AAC98763 encode the human colon cancer antigens, given in AAB53234 to AAB54006. The CC called human colon cancer antigens can have cytostatic, cardioactive, muscular; CC neuroprotective, immunomodulatory, gynaecological, gastrointestinal, cc can be used in gene therapy. The colon cancer antigen polynucleotides, and be used in disposition of the proteins are useful for the prevention, cc can be used in disposition of the proteins are useful for the prevention, cc proteins and antibodies to the proteins are useful for the prevention, such as for cc proteins and disposition of colon dispositions are useful for the prevention, cc polynucleotides may be used in disposition and research, such as for cc polynucleotides may be used in disposition and research, such as for cc gystem disorders, muscular disorders, such as neural disorders, immune cc gystem disorders, muscular disorders, reproductive disorders, infectious gystem disorders, wounds, renal disorders, infectious gastrointestinal disorders, wounds, renal disorders, infectious and cardiovascular disorders. AAC98772 and cardiovascular disorders. AAC98772 and cardiovascular disorders. AAC98772 and cardiovascular disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for cancer chemotherapy. This sequence represents a fragment of the human CD95 receptor intron 1 which contains a p53 binding region described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          106 aagctttagggtegetggaggggaeeeeggttggagaggaggageggaaeteetggaeaa 165

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    mRNA was obtd. from human lymphocytes and PCR was used to make cDNA specific for Fas-delta-TM (i.e. Fas lacking the transmembrane region) mRNA. The PCR product was ligated into pBluescript and the recombinant plasmid was used to transfect E. coli DH5-alpha cells. insert sequence of pBluescript-Fas-delta-TM is glyen in AAQ93879.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 3; Fig.3-1 to 3-4; 38pp; English.

of Fas ligand (Fash). In some embourance of the cell mixture comprises with the immunosuppressive agent, and the cell mixture comprises of neutrophil cells. The method can be practised in vitro, ex vivo or in vivo. Suitable immunosuppressive agents include antisense in vivo. Suitable immunosuppressive agents include antisense in concern that inhibit endogenous FasL expression, soluble Fas. Conceptors, ribozymes that inhibit the endogenous expression of receptors, ribozymes that inhibit the endogenous expression of condended the endogenous expression of transforming growth factor (TGF)-beta, condogenous expression of transforming growth factor (TGF)-beta, conding for an immunosuppressive agent such as and polynucleotides coding for an immunosuppressive agent such as conditional conditions and polynucleotides coding for an immunosuppressive agent such as conditional conditions and polynucleotides coding for an autolimnune disease such as graft versus host disease, or an autolimnune disease such as considered invention also provides a method for identifying agents which the invention also provides a method for identifying agents which condulate FasL stimulation of a proinflammatory response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  B

The invention provides a method for inhibiting an proinflammatory response in a cell mixture by administering an immunosuppressive agent which inhibits the proinflammatory activity of Fas ligand (Fasi). In some embodiments, Fasi is coadministered

                                                    AAQ95297;
                                                                      AAQ95297 standard; cDNA; 2534 BP.
                                                                                                                                                                                                                                                                                                                                                                                 A cDNA library was prepared from polyA+ RNA from the human lymphoma cell line KT-3. The CDNA was ligated to BstXI-cut vector pCEV4 via BstXI linkers. The KT3 cDNA library was used to transfect monkey COS-Ab. The cells which were then suspended in buffer containing murine anti-Fas antibodies. The Fas-expressing cells aftered with goat anti-mouse Extrachromosomal DNA was prepared from adhered to the plates. transform E.coli VM100 cells. A 520bp XhoI-BamHI fragment from a positive clone (pF3) was used to screen the KT-3 cDNA library. The to a 335 amino acid pre-protein and a 319 amino acid mature protein of the human Fas antigen.

This sequence represents the coding sequence for the human Fas antigen is contained within the plasmid pCEV4/hFas. The soluble Fas antigen is contained within the plasmid pCEV4/hFas. The soluble Fas antigen contains an immobilised anti-soluble Fas antigen encoded included in the immunoassay kit of the invention. His antigen encoded included in the fas antigen and contains an immobilised antigen encoded assay of soluble Fas antigen and contains an immobilise Fas antigen encoded assay is simple and haber of different specimens by this sequence. The assay is simple and haber of different specimens sensitivity, and the capable of assaying a number of different specimens at the same time. The immunoassay is used on biological samples (such as sensitivity, and the immunoassay is used on biological samples section at the same time. The immunoassay is used on biological samples (such as serum) and is useful for diagnosis of autoimmine diseases such as rheumatoid arthritis or systemic lupus erythematosus (SLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunoassay method for soluble Fas antigen in body fluids - for diagnosis of auto:immune diseases such as rheumatoid arthritis and

The method is concerned with reducing (TK) the method of the invention. The method is concerned with reducing (TK) content of activated Fas-expressing CD8+ T-lymphocyte of Fas-ligand CC dells in an immune cell population which also comprises or activated CC (Fasi)-expressing activated CD4+ cells. It involves contacting this content of an agent (e.g. a cells in the fasi. Therefore, the method is useful for CC immune cell population which would interfere with the cell interfere the population protein) which would interfere with the cell interfere the population of activated CC interfered by the cells in immune cell populations. Also claimed interfered the populations of the agent in the manufacture of therapeutic compositions. CC identifying switable agent which can reduce depletion of the fas-expressing CD8+ TK cells in municature of the interaction of the graph covers and its ligand Fasi. By interfering with the use of tymphocytes can be triggered by Expression of Fasi on cell surface receptor Fas and its ligand Fasi. By interfering with cells interaction, the method described and its preparations can prevent cells interaction, the method described by expression of Fasi on cells interaction, the proposition with an immunodeficiency activated CD4+ cells. Such Fasi-expressing activated CD4+ cells are cells infection with an immunodeficiency virus (STV). The claimed prevention of tymphocytes (CTM) activity continues the CD4+ cells infection with the infectious agent, enabling the content of cytoxic T lymphocyte (CTM) activity content of cytoxic T lymphocyte (CTM) activity content of cytoxic the infectious agent, enabling the content of cytoxic the infectious agent, enabling content of cytoxic the infectious agent, enabling content of cytoxic the cytoxic the cytoxic the cytoxic than the cytoxic that the infectious agent, enabling the cytoxic than the cytoxi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ras protein; CD8+ T-lymphocyte killer cell; TK; Fas-ligand; FasL; Fas protein; CD8+ T-lymphocyte; human immunodeficiency virus; GD4+ cell; apoptosis; lymphocyte; human immunodeficiency virus; SIV; cytotoxic T lymphocyte; CTL; sinian immunodeficiency virus; SIV; cytotoxic T

```
The present sequence was used in the development of novel Fas region lacking one or more amino acid residues in the region stracellular (preferably at least 29 residues are deleted). The derivatives are effective regulators of apoptosis and can be e.g. diabetes, arthritis, lupus and HIV, by modulating or by modulating the second of sease, arthritis, lupus and HIV, by modulating apoptosis of such as hepatitis, influenza and HIV, by modulating apoptosis of

                                                                                                                              Shuttle vector paddel.CMVDys (AAT27558) comprises the adenovirus is elements needed for replication and virion encapsidation but single under control of the CMV promoter. It is used with a helper infection but which has disabled packaging function. Recombinant delivery to host cells and the ability to stably integrate the fost cell chromosome. Such a vector can be used that is characterized by high titer transgene into the host cell chromosome. Such a vector can be used tharany function.

It carries a CFTR gene under the control of a chimeric CMV enhancer/chicken beta-actin production that supplies the sequences needed for it used with a helper virus that supplies disabled packaging function but which has disabled packaging that there is used wiral infection but which has disabled packaging that there a productive viral infection but which has disabled packaging titler the approductive viral infection and the solility to stably integrate the ranagene delivery to host cells and the such a vector can be used transgene into the host cell chromosome. Such a vector can be the to transfer the CFTR gene for use in cystic fibrosis gene therapy.
